

UE19CS353 : OBJECT ORIENTED ANALYSIS AND DESIGN

Name : Priya Mohata

Section : E

SRN : PES2UG19CS301

PROBLEM STATEMENT :

Write a Java program to implement the following.

1. Define an abstract class TestQuestion that has a String data variable called question and a readQuestion abstract method.
2. Define three subclasses ShortAnswer, LongAnswer and MCQ. The subclasses should have the following data variables in addition to the question, ShortAnswer (numLines - by default set to 1), LongAnswer (numLines) and MCQ(numChoices, array of String for the choices)
3. The three subclasses define the readQuestion method as follows:
 1. ShortAnswer would read the question from standard input (keyboard) and also sets the numLines to 1 by default.
 2. LongAnswer would read the question and numLines from standard input (keyboard)
 3. MCQ would read the question, numChoices and choices from standard input (keyboard)
4. Write the toString method for each of the subclasses to display the details
5. The main method in TQManager class should contain an array of TestQuestions that references any type of subclasses. In the main function, the user chooses to create a question of a specific type and accordingly an instance is created and a reference is assigned in the array and the readQuestion method is invoked. Thereafter, display all the questions by implicitly invoking the toString method.

PROGRAM SCREENSHOTS:

```

2  // PRIYA MOHATA

4  // SECTION E
5
6  import java.util.Scanner;
7
8  abstract class TestQuestion{
9      // Data members :
10     String question;
11     abstract void readQuestion();
12 }
13
14 class ShortAnswer extends TestQuestion{
15
16     int numlines=1;
17
18     // Method to read the question
19     void readQuestion(){
20         System.out.println("\nEnter the question please:");
21         Scanner sc=new Scanner(System.in);
22         question=sc.nextLine();
23     }
24
25     // Method to display the output
26     public String toString(){
27         String str="The short answer question is:"+question+"\nThe number of lines are :"+numlines;
28         return str;
29     }
30 }
31

```

```

32 class LongAnswer extends TestQuestion{
33     int numlines;
34
35     // Method to read the question
36     void readQuestion(){
37         System.out.println("\nEnter the question please:");
38         Scanner sc=new Scanner(System.in);
39         question=sc.nextLine();
40         System.out.println("\nEnter the number of lines:");
41         numlines=sc.nextInt();
42     }
43
44     // Method to display the output
45     public String toString(){
46         String str="The long answer question is:"+question+"\nThe number of lines are :"+numlines;
47         return str;
48     }
49 }
50

```

```

51 class MCQ extends TestQuestion{
52     int numchoices;
53     String[] choices;
54
55     // Method to read the question
56     void readQuestion(){
57         System.out.println("\nEnter the question please:");
58         Scanner sc=new Scanner(System.in);
59         question=sc.nextLine();
60         System.out.println("\nEnter the number of choices please:");
61         numchoices=sc.nextInt();
62         choices=new String[numchoices+1];
63         System.out.println("\nEnter the choices:");
64         sc.nextLine();
65         for(int i=0;i<numchoices;i++)
66         {
67             choices[i] = sc.nextLine();
68         }
69     }
70
71     // Method to display the output
72     public String toString(){
73         String str="The MCQ question is:"+question+"\nThe number of choices are :"+numchoices+"\n";
74         str=str+"The choices are as follows:\n";
75         for(int i=0;i<numchoices;i++){
76             str=str+"Choice "+(i+1)+" "+choices[i]+"\n";
77         }
78         return str;
79     }
80 }
81 }

```

```

3

Enter the question please:
Which among these states is the largest producer of coffee in India ?

Enter the number of choices please:
4

Enter the choices:
Karnataka
Tamil Nadu
Kerala
Andra Pradesh
```

The short answer question is:What is the formula of methyl alcohol?
The number of lines are :1

The long answer question is:What were the reasons for World War II ?
The number of lines are :5

The MCQ question is:Which among these states is the largest producer of coffee in India ?
The number of choices are :4
The choices are as follows:
Choice 1 Karnataka
Choice 2 Tamil Nadu
Choice 3 Kerala
Choice 4 Andra Pradesh

ADDITIONAL QUESTION :

Write an integer list class. It should create a list of a fixed size and have a method add to add an element to the end of a list. If the list is already full, a message will be printed.

Now write a class SortedIntList that extends IntList. SortedIntList should be just like IntList except that its elements should always be in sorted order from smallest to largest. This means that when an element is inserted into a SortedIntList it should be put into its sorted place, not just at the end of the array. Hence, you need to override the add method. (Optionally, you can use recursion to locate the position of the element to be inserted.)

PROGRAM:

```
1  import java.util.Scanner;
2
3  class IntegerList{
4      int list[];
5      int numElements=0;
6
7      public IntegerList(int size) {
8          list = new int[size];
9      }
10     // Function to add in a value
11     void add(int value){
12         if(numElements==list.length){
13             System.out.println("Sorry its not possible to add elements!\n");
14         }
15         else
16         {
17             list[numElements]=value;
18             numElements++;
19         }
20     }
21 }
22
23 String display(){
24     String returnString = "";
25     for (int i = 0; i < numElements; i++) {
26         returnString += i + ": " + list[i] + "\n";
27     }
28     return returnString;
29 }
30 }
```

```

32 class SortedList extends IntegerList{
33
34     public SortedList(int size){
35         super(size);
36     }
37     void add(int value){
38         if(numElements==list.length){
39             System.out.println("Sorry its not possible to add elements!\n");
40         }
41         else
42         {
43             list[numElements]=value;
44             numElements++;
45             for (int i = 0; i < list.length; i++) {
46                 if (list[i] > value) {
47                     for (int j = list.length - 1; j > i; j--) {
48                         list[j] = list[j - 1];
49                     }
50                     list[i] = value;
51                     break;
52                 }
53             }
54         }
55     }
56 }
57
58

```

```

59 class ListTest {
60
61     Run | Debug
62     public static void main(String[] args) {
63         Scanner scan = new Scanner(System.in);
64         IntegerList myList = new IntegerList(10);
65         int count = 0;
66         int num=0;
67         while (count < 10) {
68             System.out.println("Please enter a number, enter 0 to quit:");
69             num = scan.nextInt();

71                 myList.add(num);
72                 count++;
73             } else {
74                 break;
75             }
76         }
77         System.out.println(myList.display());
78
79         SortedList mylist1=new SortedList(10);
80         int count1 = 0;
81         int num1;
82         while (count1 < 10) {
83             System.out.println("Please enter a number, enter 0 to quit:");
84             num1 = scan.nextInt();
85             if (num1 != 0) {
86                 mylist1.add(num1);
87                 count1++;
88             } else {
89                 break;
90             }
91         }
92
93         System.out.println(mylist1.display());
94         scan.close();
95     }
96 }

```
